-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 September 2003.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 3-12 and 17-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 3, 8, 17, 4, 5, 6, 7, 9, 10, 11, 12, 18, 19, 20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

a. Claims 3, 8, 17, 4, 5, 6, 7, 9, 10, 11, 12, 18, 19, 20 are rejected under 35

U.S.C. 103(a) as being unpatentable over Kanai (U.S. Patent 5,824,921) in view of Marshall et al. (U.S. Patent 6,370,891).

Regarding claim 3:

Kanai discloses a test system for simultaneously testing a plurality of heat pumps, comprising: an array of testing stations (fig. 1), wherein each of said testing stations includes at least one heating element [for attachment] attached to a first component of a heat pump and wherein each of said testing stations includes at least one sensor connected to a heat pump (col. 1, lines 35-65, col. 2, lines 27-59); a plurality of data acquisition lines each of said plurality of data acquisition lines connected to a separate sensor for each testing station (fig. 1, 6); a plurality of control lines each of said plurality of control lines connected to a second component of separate heat pumps; and a control device which receives test data through said data acquisition lines and transmits control data over said control lines (fig. 6).

Art Unit: 2863

Regarding claim 8:

Kanai discloses a test system for simultaneously testing a plurality of heat pumps, comprising: an array of testing stations (fig. 1, 6), wherein each of said testing stations includes at least one heating means [which can be] attached to a first component of a heat pump for providing a heat load to said heat pump and wherein each of said testing stations includes at least one sensor means coupled to a heat pump to generate test data (col. 1, lines 35-65, col. 10, lines 1-12); a plurality of data acquisition connection (fig. 4) means each of said plurality of data acquisition connection means connected to a separate sensor means for each testing station (fig. 6); a plurality of control connection means each of said plurality of control connection means connected to a second component of separate heat pumps (col. 1-2, lines 66-45); and a control means which receives test data through said data acquisition connection means and transmits control data over said control [lines] connection means (fig. 7-8, 15).

Regarding claim 17:

Kanai discloses a method of testing a plurality of heat pumps (fig. 1, 6), simultaneously comprising the steps of: providing a first control signal to a first component of a plurality of heat pumps to operate a function of said heat pumps; providing a second control signal to a plurality of heating [element] elements (col. 10, lines 1-12), said heating elements placing a head load on said heat pumps;

Art Unit: 2863

receiving data from a plurality of sensors coupled to said heat pumps (fig. 6); and comparing said received data to accepted performance parameters for said heat pumps (col. 1-2, lines 35-59).

Regarding claims 4, 5, 6, 7, 9, 10, 11, 12, 18, 19, 20:

Kana discloses the control lines connect to a valve of separate heat pump (fig. 2, 6), use plurality of lines and separate testing station (fig. 1, 18), the system is automated (fig. 1, 19), contains pass fail info (fig. 17), the heat pump is evaporate coil and a compressor (col. 8-9, lines 66-5, col. 9, lines 31-40, fig. 2), plurality control lines to separate heat pump station (fig. 1, 6, 10), running on a computer test station (fig. 1), pass fail results (fig. 19-25), plurality of valves of heat pump (col. 20, lines 16-25).

Kanai does not disclose use of temperature sensors. Marshall discloses the use of temperature sensors (col. 3-4, lines 55-46), in order to provide sufficient verification test data (col. 2, lines 15-28).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kanai to have the use of temperature sensors taught by Marshall in order to provide sufficient verification test data (col. 2, lines 15-28).

Response to Arguments

2. Applicant's arguments filed 9/23/2003 have been fully considered but they are not persuasive.

A. Applicant argues that the prior art does not show the 'temperature sensor are connected to the evaporator in a heat pump', combination of Kanai and Marshall show the 'temperature sensor are connected to the evaporator' (Kanai Col. 2, Lines 14-19, Col. 8-9, Lines 66-5, Col.10, Lines 1-12, Marshall Col. 2, Lines 34-49).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
